

HEALTH FACILITY INTERVENTIONS

Responding to the acute shortage
of health infrastructure

1. **Oxygen concentrators** - Providing oxygen concentrators to primary care facilities in rural areas, where there has been a dire shortage
2. **Ventilators** - Procuring and ensuring the installation of ventilators in states that have expressed a need
3. **Portable hospitals (20 – 100 beds)** - Addressing the shortages of beds by adding portable hospitals to existing health facilities
4. **Cold-storage equipment** - Procuring and ensuring the installation of cold-storage facilities for vaccines, which will become a need as vaccine production increases

FRONTLINE HEALTH WORKER INTERVENTIONS

Helping those who are at the
greatest risk of getting infected

1. **Community screening and home-based management** - Providing pulse oximeters to state governments, for their entire ASHA and ANM workforce, to be able to improve community monitoring of COVID-19 patients and ensure early referral
2. **Personal protective gear (PPE)** - Providing frontline workers with masks, gloves, and hand sanitizers, for personal protection

COMMUNITY-CENTERED INTERVENTIONS

Education and nutrition remain
some of the greatest needs

1. **Awareness campaign** - Spreading community awareness of sustained COVID-appropriate behavior, including the use of masks, hand hygiene, physical distancing, and home-based care of infected individuals, along with creating awareness on vaccination and related side effects
2. **Ensuring nutrition of key vulnerable groups via cash transfer** - Supporting the nutritional needs of vulnerable communities, particularly women and children
